

## EXPERTISE YOU CAN TRUST

### Early Intervention

Our technology enables us to detect myopia in its early stages, allowing for timely and effective intervention.

### Personalized Care

With the data we get from our technology, we create a personalized myopia therapy plan tailored to your child's unique visual needs and ocular health.

### Preventing Complications

By managing myopia early on, we aim to reduce the risk of complications associated with high myopia, such as retinal detachment, glaucoma, and cataracts.

### Enhanced Quality of Life

Addressing myopia at an early stage contributes to clearer lifelong vision, reduced eye strain and discomfort, and improved overall quality of life!

Stellest®

Essilor® Stellest® lenses slow myopia progression by 67% on average\*\*

Now available with 6 sun tints

### Eyes 360 Difference

We provide the type of care we would expect for our loved ones.

We aim to set a new standard in pediatric eye care by providing a comprehensive myopia therapy strategy encompassing treatment and prevention. This program ensures our youngest patients have the best possible start in life with healthy vision.

## EYES 360 MYOPIA THERAPY PROGRAM

### What is Myopia?

Myopia, also known as nearsightedness, is a common eye condition where distant objects appear blurry while close ones are seen clearly. Parents need to be aware that myopia can affect their child's ability to see from afar and their overall eye health. As myopia worsens, it increases the chance of serious eye problems, such as macular degeneration, glaucoma, retinal detachment, and cataracts.

### Advanced Technology for Detection

Early detection of myopia is key to maintaining optimal eye health. Identifying myopia at its onset allows for timely intervention and management, reducing the risk of potential complications associated with higher levels of myopia.

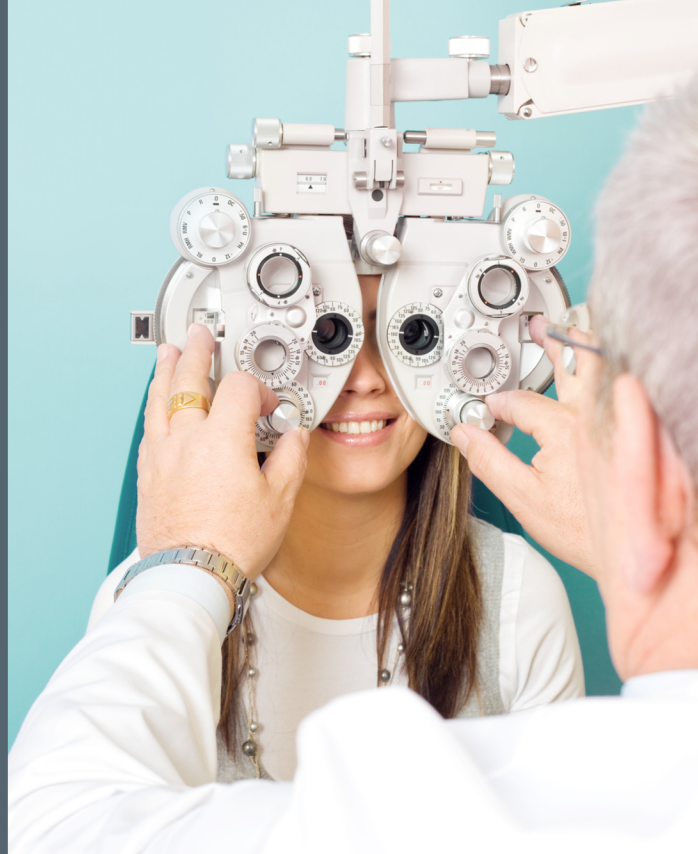

## Myopia Therapy

# PROGRAM PRICING

**\$20/ month- One Child**

**\$38/ month- Family**

- 1 Doctor Visits for One Year (\$450 Value)

## Myopia Therapy Program

Eyes 360 offers a myopia control program important for proactive eye care, personalized treatment plans, and reducing long-term risks associated with myopia. We use advanced technology to monitor the progression of Myopia care.

We use innovative solutions to help control Myopia progression. Stelless eyeglass lenses and MiSight contact lenses are solutions for slowing down myopia progression in an easy, safe, effective, and non-invasive way. We recommend these solutions in our proactive Myopia Therapy Program.

## PROGRAM ANNUAL PLAN

### Initial Exam

Assess the entire ocular system. Regular exams are crucial to detect and address vision problems, ensuring proper visual development and academic success.

### Week Two

A cycloplegic eye exam is crucial to accurately determine vision needs and assess eye health. It temporarily paralyzes eye muscles to give the most accurate reading of vision errors and helps in identifying early signs of vision problems.

### Week Four

Two weeks after glasses pick up - At this visit we ensure the perfect fit of glasses (if glasses were prescribed). All adjustments included. No charges for changes required.

### Four Months

Advanced technology follow up exam to help your doctor monitor any changes or any progression that has occurred since last visit.

### Eight Months

We continuously build a database on your eyes and monitor for accurate prescriptions, and optimal eye health. Changes to glasses are no charge.
